## About this publication...

This publication contains codes and names of Australian Standard Geographical Classification (ASGC) areas and other standard areas used for collection and dissemination of data from the 1991 Census of Population and Housing.

The publication is an essential reference document when determining the location of a geographical area of interest in relation to the classification hierarchy, for example, the statistical division (SD) in which a statistical local area (SLA) is located, or whether a particular legal local government area (LGA) consists of more than one SLA.

The codes enable users to cross-reference geographic areas in this publication with areas in other census products which use codes only, such as maps and some electronic products.

The ASGC areas relevant to the 1991 Census are also listed in the *Australian Standard Geographical Classification* (ASGC) (1216.0), edition 2.1.

## 1991 Census geographic structure...

Most of the areas listed in this publication consist of aggregates of census collection districts (CDs). CDs are the smallest geographic areas used for collection and dissemination of census data.

The geographic areas used for the collection and dissemination of census data are divided into 2 types: Australian Standard Geographical Classification (ASGC) areas and other areas.

The main purpose of the ASGC is to enable spatially classified statistics to be produced on a useful and comparable basis. The ASGC structure provides a number of parallel streams for the aggregation of collection districts (CDs) into larger units.

A number of other areas used in the census are not defined by the ABS, however the ABS creates approximations of these areas by aggregating CDs.

Figure 1. illustrates the standard geographic areas that are applicable to the 1991 Census.

## The geographic areas...

### Collection District (CD)

The collection district (CD) is the smallest spatial unit type in the Australian Standard Geographical Classification (ASGC). It is the basic building block used to form ASGC and other areas.

The CD is designed as the basic unit for collecting and disseminating census data. CDs are defined for each population census and are current only at census time. For the 1991 Census, the CDs were those defined as at 1 January 1991.

The basic concept of a CD is that of a ten day field workload area for a census collector. In urban areas CDs average about 300 dwellings, while in rural areas the number of dwellings per CD reduces as population densities decrease. CDs, in aggregate, cover the whole of Australia without gaps or overlaps.

For the 1991 Census there were 31,410 CDs, including 9 CDs which cover Australia's external territories of Christmas Island and the Cocos (Keeling) Islands.

### **Statistical Local Area (SLA)**

Statistical local areas (SLAs) must consist of one or more whole collection districts (CDs) and cover, in aggregate, the whole of Australia without gaps or overlaps. They are the key intermediate spatial units for the dissemination of census data.

SLAs correspond in most cases to legal local government areas (LGAs). The main exceptions are:

- where the boundaries of one or more statistical subdivisions (SSDs) cut across a legal LGA, the legal LGA must be split into two or more parts, each of which falls within the relevant SSD.
- where a particular legal LGA is substantially different from other equivalent legal LGAs in terms of size and economic significance, the legal LGAs can be split into sub-areas. For example, the city of Brisbane covers a large area and is split into 165 SLAs.

Where an area is **unincorporated**, that is, not part of an LGA, an SLA is created.

In the ASGC, oil rigs and other man-made platforms are formed into Off-Shore Areas. For census purposes, people on board vessels in or between Australian ports, or on board long-distance trains, buses or aircraft are classified as being migratory. The two groups are combined to form an **Off-Shore Areas and Migratory SLA** for each State and the Northern Territory for the census.

For the 1991 Census, Australian residents temporarily in Antarctica were within the scope of the census and included in Tasmania's Off-Shore Areas and Migratory SLA.

Also for census purposes, an **Undefined SLA code** (special purpose code) is assigned to each capital city and to each State. These codes are designed to accommodate responses to census questions on usual residence which were too imprecise to code them to specific SLAs.

### **Statistical Subdivision (SSD)**

Statistical subdivisions (SSDs) are the smaller of two ASGC general purpose regional type spatial units; the other is the statistical division (SD). SSDs are defined in most States on the same basis as SDs.

SSDs consist of one or more statistical local areas (SLAs) and cover, in aggregate, the whole of Australia without gaps or overlaps.

### **Statistical Division (SD)**

Statistical divisions (SDs) are the larger of two ASGC general purpose regional type spatial units; the smaller one is the statistical subdivision (SSD).

SDs consist of one or more SSDs and cover, in aggregate, the whole of Australia without gaps or overlaps. They do not cross State or Territory boundaries.

SDs are designed to be relatively homogeneous regions characterised by identifiable social and economic links between the inhabitants and the economic units in the region, under the unifying influence of one or more major towns or cities.

Capital city SDs are predominantly urban in character and the boundaries are delineated to contain the anticipated urban development of the capital cities (and associated urban centres) for a period of at least twenty years.

### **Legal Local Government Area (LGA)**

Legal local government areas (LGAs) are spatial units which represent the whole undivided geographical area of responsibility of either:

- an incorporated local government council, or
- an incorporated community government council (CGC) where the CGC is of sufficient size and statistical significance.

There are 832 legal LGAs in Australia at the time of the 1991 Census which collectively cover only a part of Australia. The major areas not covered by legal LGAs are the large northern parts of South Australia, most of the Northern Territory and all of the Australian Capital Territory.

The number of LGAs and their boundaries change over time. They are the responsibility of the State/Territory governments. For census purposes, changes to LGAs between censuses are not implemented until the next census.

### **Statistical Region (SR)**

Statistical regions (SRs) form part of the ASGC Statistical Region Structure. SRs cover, in aggregate, the whole of Australia without gaps or overlaps. They are large regional type spatial units.

The minimum population size of SRs is approximately 147,000.

### **Statistical District (S Dist.)**

Statistical districts (S Dists) are predominantly urban areas of Australia which are not contained wholly within one legal local government area (LGA) or within a capital city statistical division (SD).

S Dists are composed of one or more statistical subdivisions (SSDs). Whilst the majority are contained wholly within one State/Territory, S Dists can and, in three instances, actually do cross State/Territory boundaries.

## **Section of State**

Within a State or Territory each Section of State represents an aggregation of non-contiguous geographical areas of a particular type. They are defined for each census and are current only at the time of the census.

The Sections of State are:

- Major Urban: all urban centres with a population of 100,000 and over
- Other Urban: all urban centres with a population of 1,000 to 99,999
- Bounded Locality: all localities with a population of 200 to 999
- Rural Balance: the remainder of the State/Territory
- Migratory: Off-Shore Areas and Migratory.

## **State/Territory (S/T)**

States/Territories (S/Ts) are the largest type of spatial unit in the ASGC. There are six States and two Territories recognized in the ASGC as being within Australia: New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania, the Northern Territory and the Australian Capital Territory (including Jervis Bay Territory).

Note that, as of 1 June 1992, Jervis Bay Territory is legally a separate Territory. However, it will be included with the Australian Capital Territory in all standard 1991 Census products.

## **Urban Centre/Locality (UC/L)**

Broadly an Urban Centre is a population cluster of 1,000 or more people. A Locality is a population cluster of between 200 and 999 people. People living in Urban Centres are classified as urban for statistical purposes while those in Localities are classified as rural. The criteria for delimiting UC/Ls are based on the Linge criteria.

Details of these criteria as applied for the 1991 Census, and the codes and names of the 1991 Census UC/Ls, will be available in the publication *1991 Census - Urban Centres/Localities Code List* (2909.0) due for release September quarter 1992.

## **Census Division**

Census divisions are administrative regions designed for the distribution and collection of census forms. They should not be confused with statistical divisions (SDs).

For administrative reasons census divisions are further divided into **census subdivisions**. Census subdivisions are designed to group about 10 to 12 collection districts (CDs). **Commonwealth Electoral Division (CED)**

Commonwealth electoral divisions are approximated by aggregating collection districts (CDs) that lie wholly or partly within the electoral division.

### **State Electoral Division/District (SED)**

State electoral divisions are approximated by aggregating collection districts (CDs) that lie wholly or partly within the electoral division.

### **Journey to Work Study Area**

Journey to work study areas are non-contiguous urban areas within each state. The areas selected are of interest to transport authorities, and other organisations and individuals who require data on urban transport patterns. Journey to work data is available only for people living and working within the Journey to Work Study Area in each state.

Within each Journey to Work Study Area, there are a number of **Destination Zones**. These destination zones are designed by transport authorities and may not be based on collection districts.

### **Suburb**

Suburbs are approximated by aggregating collection districts (CDs) that lie wholly or partly within the suburb. They are available from the ABS for particular urban areas in South Australia, Western Australia and Tasmania.

### **Collection District Derived Postcode**

Collection District Derived Postcodes are approximated by aggregating collection districts (CDs) that lie wholly or partly within the Postcode.

### **Australia Post Postcode**

These are official areas as defined by Australia Post. This is the first census to provide postcodes as defined by Australia Post, as well as approximations generated by aggregating CDs.

## **Changes to geographic areas...**

This series of tables lists changes to ASGC areas that have occurred from the 1986 Census to the 1991 Census. There is one table for each State and Territory.

Changes to geographical areas are the result of: a loss or gain in area due to boundary changes; areas being subdivided into smaller areas or amalgamated into larger ones; a name change; or a change in the status of the area, e.g. the area may have been declared a city.

Information on these changes is useful to allow comparison of data between the censuses.

Where data from previous censuses appears in 1991 Census standard output, and a statistical boundary has changed, data has been adjusted to the 1991 boundaries.

## **Abbreviations...**

(B)	Borough
(C)	City
(CGC)	Community Government Council
(DC)	District Council
(M)	Municipality
(RC)	Rural City
(S)	Shire
(T)	Town
Pt	Part
SF	State Forest

## **Other geographic information...**

More detailed definitions of all the ASGC units and the criteria used to define them are published in the *Australian Standard Geographical Classification (ASGC) (1216.0)*.

Information about Urban Centres and Localities (UC/Ls) for the 1991 Census will be available in the publication *1991 Census Urban Centres/ Localities Code List (2909.0)*, due for release September quarter 1992.

The *Collection District Comparability List (2919.0)* indicates the degree to which a CD has changed between the 1991, 1986 and 1981 Censuses. The list is available on microfiche and floppy disk.

The *Collection District Conversion List (2918.0)* provides the link between CDs, ASGC areas and other standard areas in which they lie. The list will be available on microfiche and floppy disk, due for released September quarter 1992.

The 1991 Census is the first census to provide both Collection District Derived Postcodes and Australia Post Postcodes. Standard products will contain Australia Post Postcodes, with Collection District Derived Postcodes available as a customised service.

Information about Commonwealth Electoral Division (CED) and State Electoral Division/District (SED) areas is available from the ABS. These areas may be subject to electoral review in the period between censuses. For information about current CEDs and SEDs, contact the relevant State/Territory office.

Customised geographic information such as area, relationships between CDs and other geographic areas, and latitude and longitude of the centroids of CDs can also be provided.

## **Maps...**

1991 Census collection district (CD) maps are available in hardcopy and on microfiche. They will also available on an ad-hoc basis, where topographic level, boundaries, labelling and scale can all be specified. This service will available through Information Services from September 1992.

ABS digitised census boundaries will be available for all standard areas for which data are available. Digitising

involves tracing a graphic image, such as a boundary, and converting points on that image into geographic co-ordinates such as latitude and longitude. These co-ordinates, or points, are recorded and stored on computer files. Mapping software is used to convert these points back into the lines which define the boundaries.

In addition to the boundaries, a file containing the co-ordinates of a central point within each CD, the centroid, is also available.

The CD-ROM product **CMAP91** will contain topographical data for all of Australia overlaid by 1991 Census statistical boundaries. Data will be indexed to allow the display of user specified maps. Maps will be able to be manipulated on screen and printed. **CMAP91** will be available at State/Territory and Australia levels, and is due for release September 1992.

#### **Additional information...**

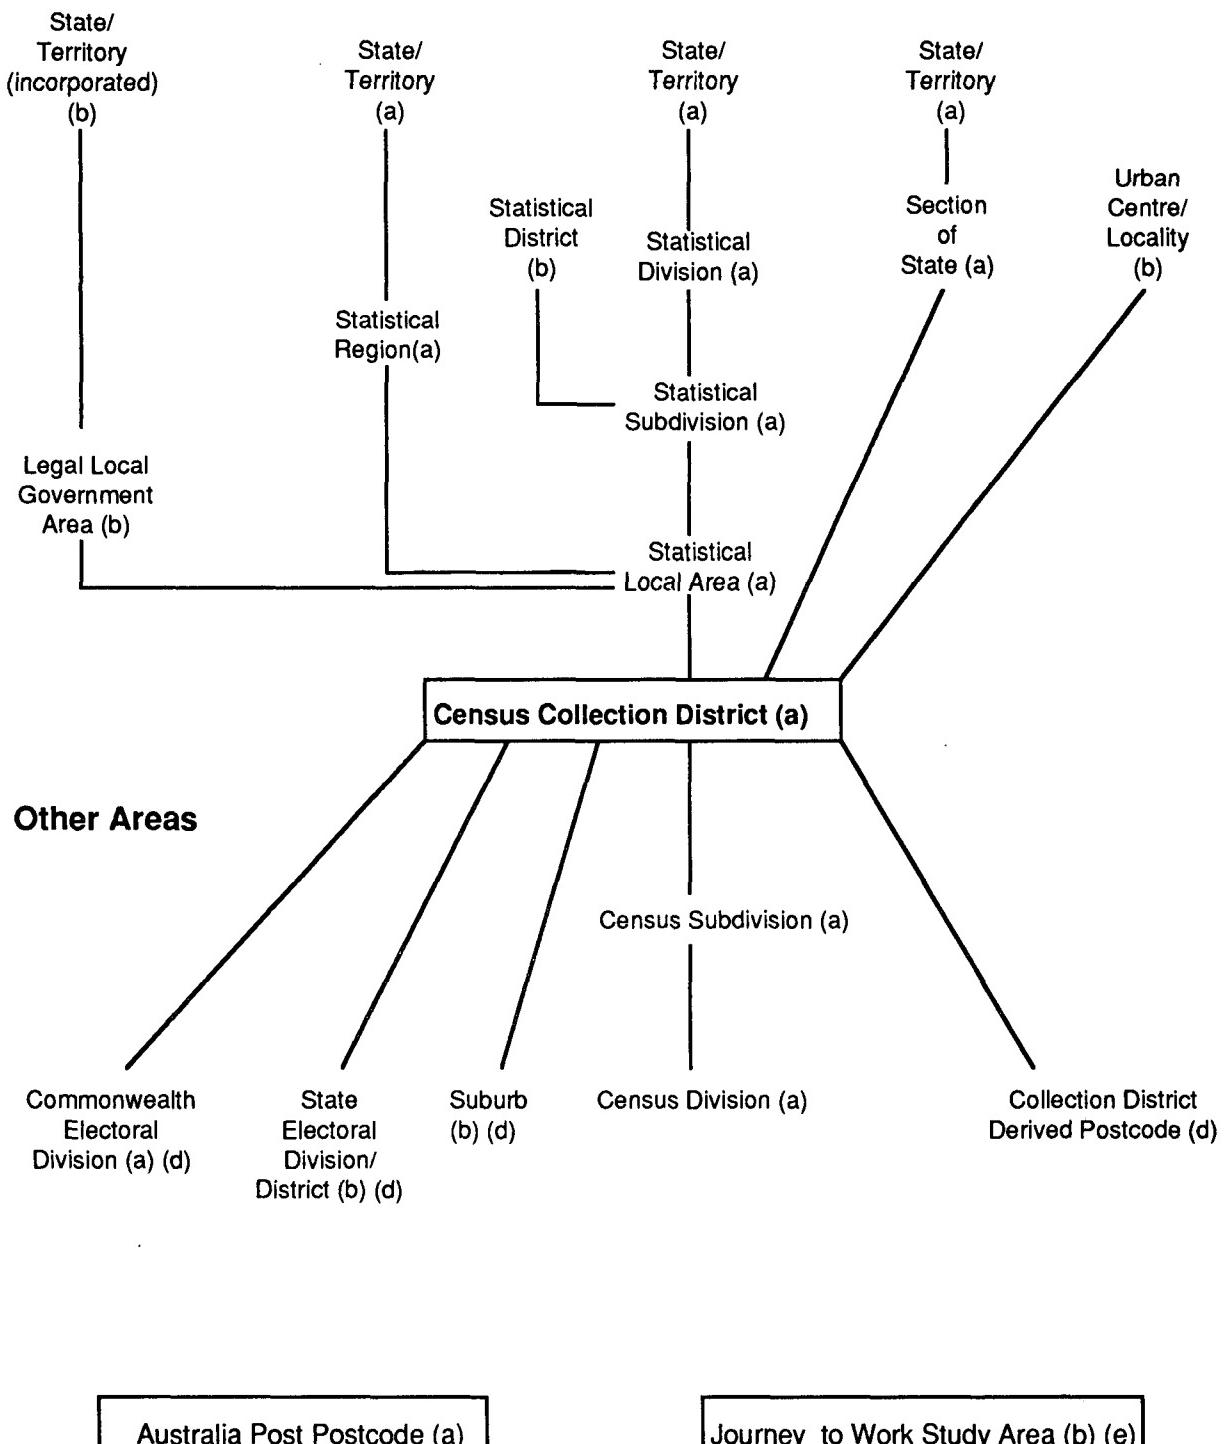

For detailed explanations of data, census concepts, terminology, variables and classifications, refer to the *1991 Census Dictionary* (2901.0) and *1991 Census Directory of Classifications* (2904.0).

*1991 Census - A Guide to Products and Services* (2910.0) provides details on national products and services. *Census Update*, a quarterly newsletter, will keep you up to date with developments in all census products and services. It highlights recent and forthcoming releases, and contains regular features on census data quality and usage. Contact Census Marketing on (06) 252 7879 for details.

For more information on the wide range of data available from the 1991 Census, including data customised to suit specific requirements, contact the ABS office in your State or Territory.

**Figure 1. 1991 Census Geographic Structure**

**ASGC Areas**

NOTE : (a) Cover all of Australia. (b) Do not cover all of Australia. (c) Only available for some States. (d) Approximations created by aggregating CDs. (e) Are comprised of destination zones.

NOTE: These suburb codes are only available for Adelaide, Perth, Hobart, Launceston, Devonport and Burnie.

(1) For Adelaide the suburbs listed are those within the Adelaide Statistical Division. A number of suburbs are too small for census data to be disseminated. For census output, these suburbs have been combined with an adjacent suburb and the code deleted from the list. For information on these suburbs contact the Adelaide office of the ABS.

## *For more information ...*

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below for contact details).

### **Information Consultancy Service**

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

### **Electronic Data Services**

A growing range of our data is available on electronic media. Selections of the most frequently requested data are available, updated daily, on DISCOVERY (Key \*656#). Our TELESTATS service delivers major economic indicator publications ready to download into your computer on the day of release. Our PC-AUSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on our electronic data services, contact Information Services in any of our Offices on the numbers below.

### **Bookshops and Subscriptions**

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free on 008 02 06 08 Australia wide.
